Kapitel 1

Introduction

general motivation for your work, context and goals: 1-2 pages

- ▷ **Context:** make sure to link where your work fits in
- ▷ **Problem:** gap in knowledge, too expensive, too slow, a deficiency, superseded technology
- ▷ **Strategy:** the way you will address the problem

1.1 Sample Section

The following samples explain how to insert references, figures and tables, how to set math, algorithms and program code.

1.1.1 Figures

Figure 1.1 shows something.

You can also use tikz for your figures, see Figure ?? . However other tools, like <https://www.yworks.com/products/yed> are more suitable.

1.1.2 Tables

Short tables, e.g., Table 1.1 are straightforward to define.

Abbildung 1.1: Example Figure

Abbildung 1.2: Tikz Example

left aligned	same here	right aligned
1	2	3
4	5	6
7	8	9

Tabelle 1.1: Short table

Class	application examples	lifetime aspects
Critical, coverage	Forest fire detection, flood detection, nuclear/chemical/biological attack detection, battlefield surveillance, intrusion detection	$c_{ca}/c_{ct}/c_{cb}, c_{ln}, c_{la}, c_{lo}$
Critical, no coverage	Monitoring human physiological data, military monitoring of friendly forces, machine monitoring	$c_{cc}, c_{ln}, c_{la}, c_{lo}$
Noncritical, coverage	Agriculture, smart buildings, habitat monitoring (sensors monitor the inhabitants in a region)	$c_{ac}/c_{tc}/c_{bc}, c_{cc}, c_{sd}$
Noncritical, no coverage	Home automation, habitat monitoring (sensors are attached to animals and monitor their health and social contacts)	c_{cc}, c_{sd}

Tabelle 1.2: Sensor network applications

Multi-line cells can be set as shown in Table 1.2.

1.1.3 Math

Simple inlined equations: $\zeta(t) = \min(\zeta_{**}(t))$. The same in a numbered equation, i.e. Eq. 1.1, which states

$$\zeta(t) = \min(\zeta_{**}(t)). \quad (1.1)$$

$$e = m \cdot c^2 \quad (1.2)$$

$$v = \frac{s}{t}$$

$$\ln(e) + \sin^2(p) + \cos^2(p) = \sum_{n=0}^{\infty} \left(\frac{1}{2}\right)^n \quad (1.3)$$

Equations covering multiple lines should be aligned. Note that the numbering is added automatically, independent of whether the equation is actually referenced or not, as in

$$sd_{max} = \max((t_{i+1} - t_i) : \zeta(t_i) < 1, i \in [0, |T| - 1]), \quad (1.4)$$

$$\psi_{sd}(t) = \begin{cases} \frac{\Delta t_{sd}}{sd_{max}} & \text{if } sd_{max} > 0, \\ 1 & \text{if } sd_{max} = 0, \end{cases} \quad (1.5)$$

$$\zeta_{sd}(t) = \frac{\psi_{sd} - cl_{sd}}{c_{sd} - cl_{sd}}. \quad (1.6)$$

1.1.4 Algorithms

Algorithm 1 is an example algorithm.

Data: this text

Result: how to write algorithm with \LaTeX 2e

initialization;

while *not at end of this document* **do**

 read current;

if *understand* **then**

 go to next section;

 current section becomes this one;

else

 go back to the beginning of current section;

end

end

Algorithmus 1: How to write algorithms

1.1.5 Program Code

Program code should be omitted, but if absolutely necessary, it should be set as seen in Listing 1.

Listing 1: Sample application

```
#include <iostream> 1
int main() { 2
    std::cout << "Hello world" << std::endl; 3
}
```

```
    return 0;  
}
```

4

5

1.1.6 References

You can cite something with **[Berlin]**. Or **raake2014quality** for Authors **[raake2014quality]**. Or **[coresparql]**. Or **[sparqlAlgebra]**

For bibtex entries you can use different sources, e.g.,

- ▷ <http://scholar.google.de/>
- ▷ <http://books.google.de>
- ▷ <http://citeseerx.ist.psu.edu>
- ▷ <http://ieeexplore.ieee.org/>
- ▷ <http://dblp.uni-trier.de/>

1.1.7 TODOs and FIXMEs

You can use the the `\todoI` command to add short “sticky notes” to your document.

This is what a TODO looks like

This will also trigger generation of a list-of-TODOs at the end of the document. The same goes for the `\note`

This is what a NOTE looks like

command.

Kapitel 2

Fundamentals

Fundamentals / environment and related work: 1/3

- ▷ comment on employed hardware and software
- ▷ describe methods and techniques that build the basis of your work
- ▷ review related work(!)

Kapitel 3

Architecture/Implementation

Developed architecture / system design / implementation: 1/3

- ▷ start with a theoretical approach
- ▷ describe the developed system/algorithm/method from a high-level point of view
- ▷ go ahead in presenting your developments in more detail

Kapitel 4

Analysis/ Evaluation

Measurement results / analysis / discussion: 1/3

- ▷ whatever you have done, you must comment it, compare it to other systems, evaluate it, using e.g. subjective tests
- ▷ usually, adequate graphs help to show the benefits of your approach
- ▷ caution: each result/graph must be discussed! what's the reason for this peak or why have you observed this effect

Kapitel 5

Conclusion

Conclusion: 1 page

- ▷ summarize again what your thesis did, but now emphasize more the results, and comparisons
- ▷ write conclusions that can be drawn from the results found and the discussion presented in the paper
- ▷ future work (be very brief, explain what, but not much how)

Erklärung

Declaration

Ich versichere, dass ich die vorliegende Arbeit ohne unzulässige Hilfe Dritter und ohne Benutzung anderer als der angegebenen Hilfsmittel angefertigt habe. Die aus anderen Quellen direkt oder indirekt übernommenen Daten und Konzepte sind unter Angabe der Quelle gekennzeichnet.

Bei der Auswahl und Auswertung folgenden Materials haben mir die nachstehend aufgeführten Personen in der jeweils beschriebenen Weise entgeltlich/unentgeltlich geholfen:

1.
2. ...
3. ...

Weitere Personen waren an der inhaltlich-materiellen Erstellung der vorliegenden Arbeit nicht beteiligt. Insbesondere habe ich hierfür nicht die entgeltliche Hilfe von Vermittlungs bzw. Beratungsdiensten (Promotionsberater oder anderer Personen) in Anspruch genommen. Niemand hat von mir unmittelbar oder mittelbar geldwerte Leistungen für Arbeiten erhalten, die im Zusammenhang mit dem Inhalt der vorgelegten Dissertation stehen.

Die Arbeit wurde bisher weder im In- noch im Ausland in gleicher oder ähnlicher Form einer Prüfungsbehörde vorgelegt. Ich bin darauf hingewiesen worden, dass die Unrichtigkeit der vorstehenden Erklärung als Täuschungsversuch bewertet wird und gemäß § 7 Abs. 10 der Promotionsordnung den Abbruch des Promotionsverfahrens zur Folge hat.
